FOR IMMEDIATE RELEASE

**GUITAR EFFECTS COMPANY DEBUTS WITH A BLEND OF
OLD SCHOOL DESIGN AND MODERN TECHNOLOGY**

Sonicpedal hits the market with their *Destroyer* line of overdrive and distortion pedals.

Sonicpedal, a Reno, NV company, enters the guitar effects arena with a unique line of overdrive and distortion pedals. The *Destroyer* line of effects is the result of an R&D effort aimed at taking the best of the past and revitalizing it with modern components and design techniques. The result is an exceptional overdrive and distortion that captures all the warmth, sustain and crunch of a tube amp or effect...without the tube.

Sonicpedal equips the *Destroyer* with a 3-channel EQ that stands out in the crowd. The filter allows for individual volume panning of the bass, mid and treble frequencies, producing a much stronger filter effect than a single tone knob or unity-gain filter.

The *Destroyer* is offered in three models: the Model A Overdrive (MSRP \$225.00); the Model B Distortion (MSRP \$225.00); and the Model C Combo Overdrive/Distortion (MSRP \$240.00). In addition to the bass-mid-treble knobs, the *Destroyer Model C* breaks out the frequency and depth controls of the filter to provide an infinite number of tonal combinations.
